

AI Justification Report

1. Introduction

This report justifies the use of artificial intelligence within the Adaptive English Learning Application defined in the SDD.

2. Role of AI in the System

AI is used throughout the system to enhance personalisation, learning effectiveness, and scalability. According to the SDD, AI supports onboarding, lesson recommendations, real-time assistance, progress tracking, and teacher analytics.

3. Benefits of AI

Key benefits include:

- Adaptive learning paths based on user behaviour
- Immediate feedback and contextual explanations
- Dynamic difficulty adjustment
- Scalable support for large numbers of learners

4. Educational Value

AI enables the system to move beyond static exercises by responding intelligently to learner input. This supports deeper understanding rather than surface-level correction.

5. Limitations and Safeguards

AI output must be monitored to avoid bias and incorrect feedback. The system is designed to support learning and teaching, not replace educators.

6. Conclusion

AI is an appropriate and necessary technology for achieving the project's objectives, providing adaptive and personalised language learning at scale.
