

Market Research Report

1. Introduction

This market research report supports the development of the Adaptive AI-Driven English Learning Application described in the Software Design Document (SDD). The report evaluates demand, target users, and market trends relevant to AI-based language learning systems.

2. Market Context

English is the dominant global language for education, business, and technology. As a result, there is sustained demand for English language learning tools, particularly those that support academic and professional development. The rise of mobile learning and remote education has accelerated adoption of digital language platforms.

3. Target Market

Based on the SDD, the primary target users are:

- University and college students
- International students studying in English-speaking environments
- Adult ESL/EFL learners

Secondary users include teachers and coordinators who require access to learner analytics and progress reporting.

4. Market Needs

Market analysis identifies the following key needs:

- Personalised learning paths
- Immediate feedback and explanations
- Flexible learning across mobile and web platforms
- Analytics to support educators

The adaptive dashboards, AI assistance, and analytics described in the SDD directly address these needs.

5. Market Opportunity

While many English learning apps exist, few combine adaptive AI learning, real-time assistance, and teacher analytics in a single system. This creates a clear opportunity for the proposed application.

6. Conclusion

The market research confirms strong demand for an AI-driven English learning application that supports both learners and educators. The proposed system aligns well with current educational technology trends.
