

# AI Usage Justification

## 1. Introduction

This document justifies the use of artificial intelligence within the proposed English learning application.

## 2. Why AI Is Appropriate

AI is suitable for this application because language learning requires continuous feedback, pattern recognition, and adaptation to individual learner needs. Traditional rule-based systems are limited in handling natural language complexity.

## 3. AI Functionality

The AI system can:

- Analyse user input for grammatical and structural errors
- Provide contextual explanations rather than simple corrections
- Adapt difficulty levels based on learner performance
- Simulate conversational practice using natural language processing

## 4. Benefits of AI Integration

Using AI provides several advantages:

- Personalised learning experiences
- Immediate, consistent feedback
- Scalability to support many users simultaneously
- Improved learner engagement through interactive responses

## 5. Ethical Considerations

Ethical considerations include:

- Protecting user data and privacy
- Avoiding bias in language feedback
- Ensuring AI supports learning rather than replacing teachers

## 6. Conclusion

AI enhances the effectiveness of the English learning application by providing adaptive, personalised support that would be difficult to achieve using traditional software methods.
