

Market Research – AI-Driven English Learning App

1. Introduction

This document presents market research for an AI-driven English learning application aimed at supporting learners in improving grammar, vocabulary, writing, and speaking skills. The purpose of this research is to identify the target market, understand demand, and justify the viability of the proposed application.

2. Target Market

The primary target market consists of:

- Non-native English speakers (ESL/EFL learners)
- University and college students
- International students studying in English-speaking countries
- Adult learners seeking to improve academic or professional English

Secondary users may include secondary-school students and professionals preparing for English proficiency exams such as IELTS or TOEFL.

3. Market Size and Demand

English is the most widely studied second language globally. The growth of online education, remote learning, and AI-powered tools has increased demand for flexible and personalised language learning solutions. Many learners seek tools that provide instant feedback, personalised practice, and availability outside traditional classroom hours.

4. Trends in the Market

Key trends influencing the market include:

- Increased adoption of AI in education
- Growth of mobile learning applications
- Demand for personalised learning experiences
- Use of data-driven feedback to track learner progress

These trends indicate a strong opportunity for an AI-driven English learning application that adapts to individual learner needs.

5. Competitor Overview

The market already contains popular English learning platforms; however, many focus on either vocabulary or grammar, with limited adaptive feedback. This creates an opportunity for a more intelligent, tutor-like system that combines multiple language skills.

6. Conclusion

Market research indicates strong and growing demand for AI-based English learning tools. A well-designed application that focuses on personalised feedback and academic English support would be competitive within the current market.
