

3rd ClientTeam meeting

Date: February 9 , 2026

Date:	November 14,2025
Participants:	. Nathan Kwenda . Favour Gabriel-Oluwatobi . Chukwunedum Isu . Oluwajomiloju Fakolujo .Tomek Bergier (Client)
Location:	Portland square
Meeting Goals:	. Show client Figma prototype . Get to understand client more

Meeting Purpose

The purpose of this meeting was to present our Figma design prototype for the AI-driven English learning application to the client. The goal was to gather feedback on the current design and understand what changes could be made to improve usability and overall user experience.

Attendance

- Team members were present.
 - Client was present.
-

Outcome

The client was shown the Figma designs developed for the AI-powered English learning app. After reviewing the designs, the client suggested a different approach to how the app should be structured and presented. He emphasized the importance of simplicity and user comfort.

Additionally, the client recommended creating a questionnaire to better understand potential users and what they expect from an English learning application.

Discussion Highlights

1. Figma Design

The team presented the Figma prototype and walked the client through the layout, structure, and user interface decisions.

The client provided the following feedback:

- The design currently appears somewhat formal and structured.
- It seems tailored toward highly motivated learners who are determined and comfortable with a more serious interface.
- However, the likely target audience may prefer a more relaxed and less demanding experience.
- Users may not want to feel stressed or overwhelmed while learning English.
- The app should therefore be designed in a way that is easy to use, intuitive, and stress-free.

The feedback made it clear that the design should prioritize simplicity and accessibility rather than complexity.

2. Questionnaire

The client suggested creating a questionnaire aimed at potential users.

The purpose of this questionnaire would be to:

- Understand users' motivations for learning English
- Identify what features they would like in an English learning app
- Determine their preferred learning styles
- Learn about any frustrations they have with existing apps

This would ensure that future design decisions are based on real user needs rather than assumptions.

3. Research

The client also recommended conducting further research on customers in order to better define and narrow down the core needs of the English learning app.

This includes:

- Understanding the target audience more clearly
- Identifying essential features versus unnecessary ones
- Ensuring the app remains focused and not overly complicated

Learning Approach Considerations

Based on the client's feedback, it was understood that:

- The app should not be too complicated or overwhelming.
- The user interface must be simple and easy to navigate.
- The learning experience should feel engaging and comfortable rather than stressful.
- More user research, including questionnaires, is necessary to better guide the design process.

Client Questions

The main aim of the meeting was to understand the client's opinion on the current Figma design. Key questions included:

- How does the Figma design look in its current state?
- What additional considerations should we take into account?

Further clarification may be needed based on future discussions.

Roles and Responsibilities

The team agreed on the following responsibilities:

- **Backend Development:** Favour and Jomiloju
- **Frontend Development:** Chukwunedum and Nathan

Next Steps

- Prepare and distribute a questionnaire to gather deeper insight into user preferences and expectations.
- Simplify the Figma design to improve usability and ease of navigation.
- Conduct additional user research to refine the app's direction.
