

User Research Report

1. Introduction

This user research report analyses the needs, behaviours, and challenges of users identified in the Adaptive English Learning App SDD, including learners and teachers.

2. Learner Research

English learners often struggle with limited personalised feedback, especially outside classroom settings. The SDD onboarding flow demonstrates how collecting language background, proficiency, goals, and learning style enables tailored learning experiences.

Common learner needs include:

- Grammar and sentence structure support
- Vocabulary explanations in context
- Confidence-building through guided practice
- Clear progress tracking

3. Teacher Research

Teachers require visibility into learner performance and engagement. The teacher dashboard described in the SDD provides:

- Student progress monitoring
- Engagement analytics
- AI-generated insights

These features support early intervention and data-driven teaching decisions.

4. User Personas

- International University Student: Needs academic English support and structured feedback
- Educator/Coordinator: Needs analytics and reporting to support learners effectively

5. Conclusion

User research confirms that both learners and teachers benefit from an adaptive, AI-supported learning environment. The proposed system directly addresses identified user needs.
