

Trello Task Allocation

A colour-based classification scheme was adopted to ensure clarity in task distribution and that the project went on without glitches. Blue represented the area of backend development, where the said activities were assigned to Favour and Jomiloju, whereas red signified the frontend development tasks, which Nathan and Nedu undertook. Purple indicated activities that demanded effort from both the frontend and backend, which, in turn, were completed by all members. This system enhanced coordination and lesser uncertainty about roles while also fostering an effective workflow in the project.
