

Ethical Considerations

1. Introduction

This document outlines the ethical considerations associated with developing and deploying an AI-driven English learning application, particularly within an educational context.

2. Data Privacy and Security

The application may collect user data such as written text, speech input, and progress metrics. It is essential that:

- User data is stored securely
- Personal data is minimised and anonymised where possible
- The application complies with data protection regulations such as GDPR

Users should be clearly informed about what data is collected and how it is used.

3. Informed Consent

Users must provide informed consent before using the application. This includes:

- Clear terms and conditions
- Transparent privacy policies
- The ability to opt out or delete their data

4. Bias and Fairness

AI systems may reflect biases present in their training data. To reduce this risk:

- Language feedback should be reviewed for cultural or linguistic bias
- The system should avoid penalising legitimate language variations unnecessarily

5. Educational Responsibility

The AI should support learning rather than replace educators. The application must:

- Encourage learning through explanations
- Avoid presenting AI feedback as absolute authority

6. Conclusion

By addressing privacy, fairness, and transparency, the application can be developed ethically while maintaining user trust and educational value.
