

## 4<sup>th</sup> ClientTeam meeting

Date: February 16, 2026

|                |                                                                                                                           |
|----------------|---------------------------------------------------------------------------------------------------------------------------|
| Date:          | November 14,2025                                                                                                          |
| Participants:  | . Nathan Kwenda<br>. Favour Gabriel-Oluwatobi<br>. Chukwunedum Isu<br>. Oluwajomiloju Fakolujo<br>.Tomek Bergier (Client) |
| Location:      | Portland square                                                                                                           |
| Meeting Goals: | . Share questionnaire with client<br>. Show client simplified Figma design                                                |

### Meeting Purpose

The purpose of this meeting was to present the updated questionnaire and the simplified (slimmed-down) Figma designs to the client for review and feedback.

Prior to the meeting, each team member conducted individual research on different sections of the AI-driven English learning app. This research informed the revised design decisions and improvements made to the prototype. During the session, the team presented these updates and explained how the new designs aligned more closely with user needs and previous client feedback.

The overall objective was to validate the changes made and confirm whether the project direction was aligned with the client's expectations.

---

### Attendance

- Team members were present.
  - Client was present.
- 

### Outcome

The client was presented with:

- The updated and refined questionnaire
- The simplified Figma design prototype

Chukwunedum presented the redesigned **Home Page**, which reflected a cleaner and more user-friendly layout. The client responded positively to this version and acknowledged that it was an improvement compared to the previous design.

However, the client suggested implementing a **heatmap analysis** feature to track and analyze where users click most frequently on the home page. This would help the team better understand user interaction patterns and optimize the layout accordingly.

Nathan also presented his updated **Lessons Page** design, showcasing improvements made based on earlier feedback.

Overall, the client expressed satisfaction with the direction of the redesign and confirmed that it was a step forward.

---

## Discussion Highlights

### 1. Figma Design

The team presented a more simplified and intuitive version of the Figma prototype. The redesign focused on:

- Reducing visual complexity
- Improving navigation clarity
- Making the interface more comfortable and less overwhelming
- Enhancing usability for casual learners

The client stated that the new design was significantly better and more aligned with the intended audience.

A key recommendation from the client was the creation of a **heatmap for the home page**. This would allow the team to:

- Track which buttons or sections users click first
- Identify high-engagement areas
- Detect underused features
- Make data-driven UI improvements

The client emphasized that this would help refine the app further based on real user behavior rather than assumptions.

---

### 2. Questionnaire

Nathan presented the updated questionnaire, explaining the revisions made to improve clarity and relevance.

The client reviewed the questionnaire and expressed general satisfaction with its structure and content. However, he suggested one important improvement:

- Users should have the option to skip certain questions if they do not feel comfortable answering them.

The client noted that making questions optional would:

- Improve user comfort
- Increase completion rates
- Make the questionnaire feel less demanding

This change ensures the questionnaire remains user-friendly and respectful of user preferences.

---

## Learning Approach Considerations

Based on the client's feedback, several important points were understood:

- The redesigned Figma prototype is a clear improvement and better aligned with user expectations.
- A heatmap feature is necessary to gain insight into real user interaction patterns.
- The questionnaire is well-structured but should allow optional responses.
- Data-driven decisions (via heatmap and user feedback) should guide further improvements.

This reinforces the importance of continuous testing and refinement.

---

## Client Questions

The main aim of the meeting was to understand the client's opinion on both the redesigned Figma prototype and the updated questionnaire. Key questions included:

- What does the client think of the redesigned Figma interface?
- Does the questionnaire effectively capture useful user insights?
- Are there additional adjustments required before implementation?

Further clarification may be needed in future meetings as the project progresses.

---

## Roles and Responsibilities

The team confirmed the following responsibilities:

- **Backend Development:** Favour and Jomiloju
- **Frontend Development:** Chukwunedum and Nathan

These roles remain unchanged moving forward.

---

## Next Steps

The following action points were agreed upon:

- Revise the questionnaire to ensure certain questions are optional rather than mandatory.
- Develop and implement a heatmap system for the home page to analyze user interaction.
- Continue refining the Figma design based on future feedback and user data.
- Prepare for the next review session with updated changes.
