

User Research – AI-Driven English Learning App

1. Introduction

This document outlines user research conducted to understand the needs, goals, and challenges of potential users of an AI-driven English learning application.

2. Research Methods

The following research methods were considered:

- Online surveys of university students
- Informal interviews with non-native English speakers
- Analysis of user reviews from existing English learning apps

These methods help identify common user pain points and expectations.

3. User Needs

Key user needs identified include:

- Immediate feedback on grammar and writing errors
- Support with academic and formal English
- Confidence-building tools for speaking and pronunciation
- Flexible learning that fits around study or work schedules

4. User Personas

Persona 1: International University Student

- Age: 20–25
- Goal: Improve academic writing and grammar
- Challenges: Limited feedback outside class, fear of making mistakes

Persona 2: Adult ESL Learner

- Age: 25–40
- Goal: Improve professional communication
- Challenges: Limited time, inconsistent learning progress

5. User Expectations

Users expect the app to be:

- Easy to use and accessible on mobile devices
- Personalised to their language level
- Supportive and non-judgemental
- Capable of tracking progress over time

6. Conclusion

User research shows a clear need for an intelligent English learning tool that provides personalised, real-time feedback and supports both academic and professional language development.
